About Sage Capital

As an Australian equities long short manager, Sage Capital views the market through eight unique Sage Groups enabling the team to focus on individual stock drivers and hedge systematic market risks. This style and cycle neutral investment process is designed to deliver consistent returns regardless of the market environment.

The Sage Capital investment team owns 100% of the firm and invests alongside its clients.

About the Fund

The CC Sage Capital Equity Plus Fund aims to achieve positive returns in excess of the S&P/ASX 200 Accumulation Index, after fees and expenses, over the long term by taking both long and short positions in selected Australian shares.

¹ Performance is for the CC Sage Capital Equity Plus Fund ('the Fund') - Class A, and is based on month end unit prices in Australian Dollars. Net return is calculated after management fees and operating costs. Individual investor level taxes are not taken into account when calculating net returns. This is historical performance data. The value of an investment can rise and fall and past performance is not indicative of future performance. ² Benchmark refers to the S&P/ASX 200 Accumulation Index. ³ Net Asset Value is calculated as Fund assets less Fund liabilities. ⁴ All figures disclosed include the net effect of GST and RITC. ⁵ Performance Fee of 20.5% (including the net effect of GST and RITC) based on outperformance of the Fund Benchmark, net of the Management Fee. ⁶ Refer to Definition of Terms at the end of the report.

Performance Review

The CC Sage Capital Equity Plus Fund returned -2.44% in October, underperforming the S&P/ASX 200 by -1.13% which returned -1.31%.

The strongest contributors to performance were Sage Groups, Domestic Cyclical, while REITs was a small positive, and detractors were spread amongst the other groups with Yield the weakest group.

In the strongest group, Domestic Cyclical, Qantas (ASX: QAN +9%) was a standout performer, whose share price has been recovering in a stable competitive environment and falling fuel costs have boosted profits. However, travel was broadly weaker with long positions in Flight Centre (ASX: FLT -29%) and WEB Travel Group (ASX: WEB -45%) impacting performance with Flight Centre expressing cautious guidance with top line revenue being impacted by lower fares. WEB for instance, having only recently demerged its online travel booking business, issued a poorly communicated and unexpected profit warning citing weak margins in Europe due to the Olympics and competitor discounting. While this dragged on the Global Cyclical group, an offset came from a short position in Reece (ASX: REH -19%) which reported weaker than expected 1Q sales and provided guidance that was lower than market expectations due to softer renovation activity in the US and softening prices. In the weakest group, Yield, banks outperformed insurers and drove a low success rate across the group.

There was a bout of corporate scandal in the month. The Fund was boosted by a short in Mineral Resources (ASX: MIN -24%) which sold off sharply amidst newspaper articles alleging tax avoidance and related party transactions at inflated prices by Chris Ellison and other founding executives. There was also a wind down of optimism around China stimulus, which was partially offset by a long position in WiseTech Global (ASX: WTC -13%). As founder Richard White was forced to step into a consulting role after allegations of conflicts of interest in his relationships with some employees.

Market Review

The S&P/ASX 200 Accumulation Index returned -1.31% in October as bond yields moved higher in response to the increased likelihood of a Trump U.S. presidency with tax cuts driving larger budget deficits and tariffs keeping inflation higher. The Gold group was up strongly (+9.6%) along with Yield (+3.3%), while Resources was the weakest group (-6.6%) giving back the strong performance in September with last month's optimism on China's policy stimulus fading. Higher bond yields also weighed on Global Cyclical (-5.4%), Defensives (-4.1%) and REITs (-2.5%), although the Growth (-0.6%) group was largely immune from the valuation implications.

Portfolio Positioning and Market Outlook

There have been some significant developments on the macroeconomic front in recent months. Firstly, there has been a material move up in U.S. bond yields, presumably in response to higher U.S. fiscal deficits while the U.S. Federal Reserve is no longer buying government debt. Indeed, as the likelihood of a Trump presidency and a possible Republican sweep of the houses increased, so did the pace of the sell-off in bonds.

The U.S. equity market has continued to move higher as the prospect of corporate tax cuts and a lighter regulatory touch have boosted optimism around the earnings outlook. However, there has been some rotation in the market with cyclical, small cap banks and big tech having performed well, while more interest rate sensitive sectors such as utilities, REITs and residential construction have begun to suffer. There have been similar dynamics in Australia although some of our markets segments, and growth stocks in particular, look expensive given the likely sustained move higher in the risk-free rate.

The other key shift recently has been the policy pivot by China to draw a line under falling property and equity prices. This is largely designed to boost confidence and wealth effects with the household sector rather than drive a lift in commodity intensive fixed asset investment, but the success of this pivot has been cast into doubt with the election of Trump and his proposed 60% tariff on Chinese imports. This is likely to prompt a further policy shift by China, but whether its more direct stimulus or further reform to stimulate household spending is unclear. In any case, the policy path of U.S. tariffs, trade wars and actual conflict in the Middle East and Ukraine are likely to drive greater commodity volatility.

Sage Capital continues to favour new energy metals such as copper and aluminium rather than iron ore which appears to have peaked structurally with Chinese steel production. Domestically, hopes around rapid interest rate cuts have also been dashed. Stronger than expected employment growth and more persistent underlying inflation are likely to keep the RBA on hold well into next year. As the impact of tax cuts fade, the run-up in the valuations of many retail stocks appears unsustainable.

As always, portfolio tilts are minor, with the portfolio constructed using Sage Groups to minimise macro volatility with a focus on individual companies within these groups.
